Notes:

This work is for violin with pre-recorded computer music. The computer music is in stereo, and may be played back from DAT or CD in performance.

The computer music "DJ" should ideally sit at a mixing desk in the center of the audience, adjusting balances as necessary during performance. Once the computer music begins in bar seven, it continues to run throughout the remainder of the piece.

As the notation suggests, the computer music part contains some clear cues for the violin, to help the performer remain coordinated with it. However, in other sections of the piece there is no need for exact coordination, giving the musician some freedom to "play" with rubato and such. In addition, at the end of the piece I have purposely composed a longer duration to the computer music part than I believe will be necessary in performance. This allows for individual performers to adjust their realization of the rising ending run without any worry of coordination problems with the computer music. As the violinist plays the final rising run, the "DJ" should crescendo the computer music in tandem. As the violin plays the final notes, the "DJ" should begin to fade out the computer music. This fade should take five to ten seconds, approximately, and can be adjusted to taste and the peculiarities of venue.
